justinstall *simply install packages*

Description

Simple utility to install packages from a number of sources. It only install if it not present already. It does not attach any packages, existing or to be installed.

Usage

```
justinstall(to_install, cran_repos = getOption("repos"), dependencies = TRUE)
```

Arguments

to_install	tibble or data.frame with packages to install (see vignette for details)
cran_repos	list of CRAN repositories (defaults to getOptions("repos"))
dependencies	whether to install dependencies, as per remotes::install_specs (defaults to TRUE)

Value

no output

Examples

```
## Not run:
to_install <- tibble::tibble(package=c("tidyverse","ochRe","customthemes"),
                             source=c("CRAN","Github","r-universe"),
                             url=c("", "ropenscilabs/ochRe", "https://carlosyanez.r-universe.dev"))

just.install::justinstall(to_install)

## End(Not run)
```
